

Release Notes - July 7, 2019

Published on 01/27/2022

New Features

Request Reporting Enhancements

Step up your reporting game with a new set of request filters that enable you to build more advanced reports. For example, filter by:

- Requesters to create a traffic report that tracks the flow of incoming requests.
- Acceptors to monitor who is responsible for accepting requests and assigning work.
- Associated Members to create visibility for requesters to see who is working on their request.

Don't forget, any reports you build can be shared with your stakeholders so they have access to the information they need!

Complete All Work Requirement

Never miss a task in a project or campaign again! This new account setting prevents users from completing projects and campaigns until all the work within the respective project or campaign is completed.

Restrictions	
Require the Completion of Projects in Campaigns All projects in a campaign must be completed before the campaign can be completed.	<input checked="" type="checkbox"/>
Require the Completion of Work in Projects All work in a project must be completed before the project can be completed.	<input checked="" type="checkbox"/>

To Do ▼

This project can't be completed because it has incomplete work.

- To Do** ✓
- In Progress
- Concepting
- Completed

Improvements

Review + Approval will now open in the same tab.

Filter by Campaign Name to see all work and time entries tied to a specific campaign.

Forms can now have auto-assignment of requesters either enabled or disabled.
