

Release Notes 1.4.0

Published on 01/27/2022

New Features

URL Review

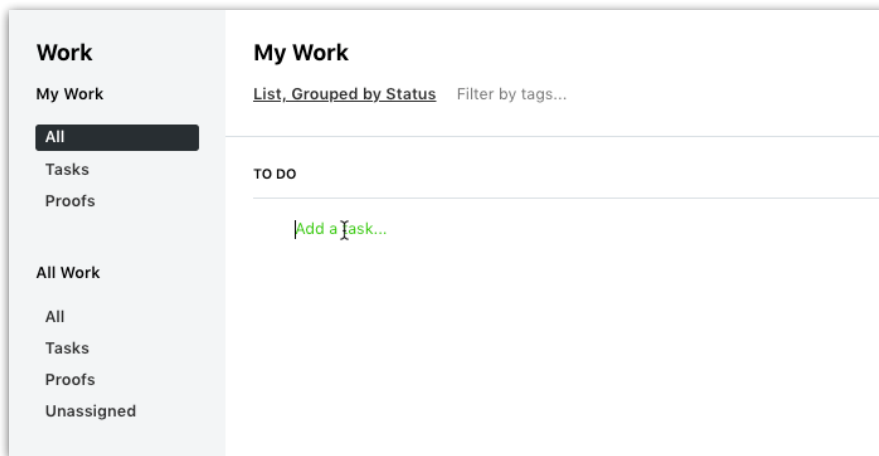

Now you can add websites to proof assets with the new [Capture Webpage](#) (<https://lytho.knowledgeowl.com/help/url-review>) feature. This allows users to review web content and access all of the page's functionality right from the review environment.

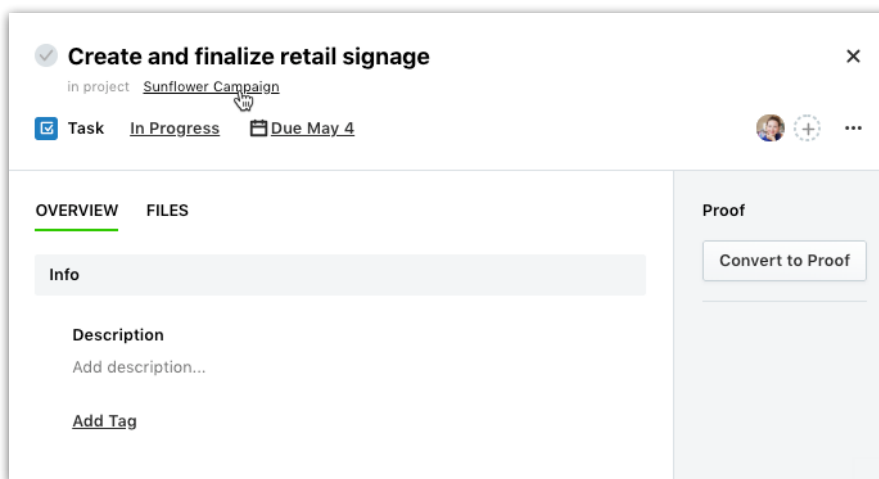

The screenshot shows a web application interface for a project titled "Develop promotional landing page" under the "Sunflower Campaign". The interface includes a "Proof" tab, an "In Progress" status, and an "Add Due Date" button. Below this, there is a "Proof Assets" section with a dashed box for "Drag and drop to attach files." A "Capture Webpage" button is visible. At the bottom, a text input field contains the URL "https://truesoap.com/spring", and there are "Cancel" and "Capture" buttons. A mouse cursor is pointing at the "Capture" button.

Improvements

- Work list grouped by status will now always show the To Do header on the page so that you can quickly add new tasks or proofs to your list.

- Project name on a work slide-out is now a hyperlink.

- The ability to create and delete work groups in a project is now tied to the Create Project Work and Delete Project Work permissions.
